BULLS BUILT FOR THE
Long Haul
FALL EDITION

DOWNEY RANCH, INC. AND
KNIEBEL CATTLE CO.

Across the Fence and Across the Country

12:00 PM CDT - Downey Ranch Headquarters,
12 miles southeast of Manhattan, KS

ANGUS • RED ANGUS • SIMANGUS

Welcome

2023 marks the 21st consecutive “Built for the Long Haul” production sale. The Kniebel and Downey/Carpenter families are honored to have you with us.

Like always, the operations aren't standing still. This year brings changes that mean good news for you, our friends and customers. We've joined forces with Allied Genetic Resources (AGR). Why AGR, you ask? AGR is a progressive leader in moving the business we all know and love forward. We are truly allies in figuring out how to bring greater surety to your genetic decisions and helping you in marketing those genetics to a larger audience that recognizes your hard work. AGR brings a nationwide reach, along with incredible knowledge in adapting/adopting genomic predictions in a simple, effective, and straightforward manner. While the breed associations do this to some extent, AGR is not constrained by a membership that may be more interested in the status quo than in moving the business forward. AGR has unique, proprietary tools that help all of us do a better job, and that's our goal at the end of the day. You'll see Right Choice™ badging throughout the catalog. Reach out to AGR's Marty Ropp, Corey Wilkins, or Jared Murnin for more information - we think they bring real value in breeding and marketing the superior stock we all strive to produce.

Kevin and Mary Ann Kniebel

KNIEBEL CATTLE CO.
Kevin and Mary Ann Kniebel • Ranch 785-349-2821
Kevin 620-767-2181 • Mary Ann 620-767-2180
428 S. 2600 Rd., White City, KS 66872
kniebel@tctelco.net **KCattle.com**

We're also moving forward with our commitment to you in terms of our guarantees. We believe in our stock and we stand behind it. Therefore, we're offering our new 3-Year Feet and Semen Guarantee. Complete information can be found on page 4. We know your purchase is a major investment and we want you to be confident in that purchase. That's why we're standing behind our bulls for 3 years, meaning his feet will stay sound and he'll continue to produce viable semen as determined by a BSE.

Our families continue to progress and change too. Cassie (Kniebel) and Dustin Aherin welcomed their 2nd son in late September, making Mary Ann and Kevin Kniebel grandparents 3-times over! Clay and Shannon Kniebel continue to live and work in the operation while raising their son Colter close by. Barb and Joe's daughter Anna Carpenter moved to the Garden City Fire Service as a Firefighter/EMT last winter. She's helping teach EMT classes this fall and will be starting paramedic training in January. Laura Carpenter is now a member of KSU's College of Veterinary Medicine Class of 2027. Her career goals include large animal practice, so book your appointments now!

Finally, we can't NOT talk about the drought. While a lot of our friends broke their drought, a lot got in deeper. We use the sunflower in our advertising for a reason; we call it “beautifully adapted,” meaning it seems to thrive no matter what Mother Nature throws at it. Emulating this prairie native, we raise bulls that can take the heat and rocky terrain and get the job done. Our females breed on range and bring a good calf into the weaning pen year-after-year. We don't think you'll find breeders that ask more from their stock than we do. If you're not one of our many repeat customers and friends, you owe it to yourself to see what all the fuss is about. While it hardly seems enough, we again say Thank You. It is because of you, our friends and customers, that we're here 21 years after our very 1st sale. We absolutely mean it - our bulls and our females are Built for the Long Haul.

TERMS AND CONDITIONS

One-half semen interest may be retained on any bull. All purchases are to be settled for on sale day unless prior arrangements have been made. All online purchases will be emailed an invoice and settlement is to be made before the animal(s) are shipped. The cattle sell under the standard terms and conditions for production sales as adopted by the American Angus Association.

VOLUME DISCOUNTS

Purchase 3 or more lots and receive a \$100 discount/lot!

TRUCKING

Pick up your lots the day of the sale and receive a \$100/lot discount. We will deliver bull lots over \$4,500 or volume bull purchases (3 or more head) within a 300 mile radius.

ACCOMMODATIONS

Simmer Motel – 833-779-0719 – US Hwy 24, Wamego (under new management)

Wamego Inn – 785-458-8888 – US Hwy 24, Wamego

Fairfield Inn – 785-539-2400 – 300 Colorado St., Manhattan

CAN'T BID ONLINE OR BE AT THE SALE IN PERSON?

We have purchased many bulls for customers sight unseen and often get them for less than the pre-arranged limit with 100% customer satisfaction. We'll discuss your needs, figure out the best purchasing system and match up the bulls that will suit your best. Please visit with us WELL IN ADVANCE and we'll work together to find the best option for you. At the end of the day, we're not happy until you're happy!

Each of the publication representatives are familiar with our operations and know our cattle. They can also help you find what you need and are happy to help. Give them a call!

There is always the option to bid over the phone. This is the most complicated and requires that you let us know ahead of time so we can make sure we have you handled. We'll accommodate you to the best of our ability, but there are limited open phone lines available. Generally, we'll call you when the lot(s) you're interested in are getting close.

Of course, you can always try calling the Sale Day Phone numbers listed in the catalog. This is the riskiest way to handle your business. A little advance planning helps us make sure you get the valuable genetics you deserve.

Join CCI.live Online for the Sale!

BULLS BUILT FOR THE *Long Haul*

3-YEAR FEET AND SEMEN GUARANTEE

Your bull is a valuable asset and we've done everything possible to ensure you get a problem-free bull. For 3 years, we guarantee:

- Your bull's natural foot shape stays structurally sound
- Your bull will produce semen that meets the requirements of a Breeding Soundness Exam as performed by a licensed veterinarian.

If not, you will receive a prorated credit to use in a future sale, less the amount of salvage value you receive. Calendar Year 1: 100%, Year 2: 67%, Year 3: 33%. For example: You pay \$5,500 for a bull and his semen fails to meet BSE requirements the next spring. You talk with us, we agree he ships and you receive \$1,200 in salvage. That means you get a credit for $\$5,500 - \$1,200 = \$4,300$ to use in a future sale. If the same situation occurred in year 2, you'd be entitled to 67% of the purchase price less salvage ($67\% \times \$5,500 - \$1,200 = \$2,485$ credit). In year 3, that would be $33\% \times \$5,500 - \$1,200 = \$615$ credit. We can not cover factors we can't control, including but not limited to injury, fighting, disease, founder, lightning, death, freeze damage, etc. We're simply guaranteeing that if you do your part and take good care of your bull(s), we'll promise his feet stay sound and his ability to produce semen remains.

Please call us immediately if you have a problem so we can solve it together.

BULL WINTERING PROGRAM

Should you choose, we will keep your new bull purchase until April 15. Fees for this service are designed to cover "room and board" along with insurance to protect your valuable investment(s). Trucking follows our policy (see page 3). We will update vaccinations and conduct a BSE prior to April 15. Should your bull not be serviceable on April 15, we will replace him with one of like kind. If a suitable replacement is unavailable, we will refund purchase price + the wintering fee.

Bull Wintering Program: \$400 + 4% of purchase price for insurance, due on sale day.

CALVE-OUT WITH OUR LIVE CALF GUARANTEE

For a fee, we will keep your purchased bred heifers and calve them out for you, giving you a guaranteed pair. In the event we lose a calf, we will offer a like replacement pair. If none is available, we will offer a refund or credit in future sales. Please note: there are NO guarantees on heifers taken home to calve. Also note that delivery is limited where pairs are concerned due to the stress on the calves. Please talk to us BEFORE the sale if you're interested in calve-out and live more than 150 miles away.

Calve-Out with Live Calf Guarantee: \$450/head due on sale day.

MORTALITY INSURANCE

We will have mortality insurance available at cost and bound immediately for your purchase(s). While we cover feet and semen on bulls, we can't cover situations that are out of our control. If one of your bulls takes a cheap shot and busts the new bull's shoulder and he must be euthanized, that is out of our hands and a good case for insurance. Insurance is available at settlement for periods from 1 month to 1 year and charged as a percentage of the purchase price (\$250 minimum applies).

With a combined 181 years in the cattle business, the Kniebel Cattle Co. and Downey Ranch and families have been bringing you hard-working seedstock for over 25 years. This fall's offering includes 150 Angus, Red Angus and SimAngus bulls, and 75 commercial bred heifers, with lessons from all of that experience applied.

Across the Fence and Across the Country

Backed by three-year feet and semen guarantees, and with 80% of the bulls selling to repeat customers, you'll find Kniebel Cattle Co. and Downey Ranch seedstock "across the fence and across the country." WHY? Because we know first-hand what it takes to build cattle for the LONG HAUL.

Our Story

We have had a lot of questions over the last 21 years about the partnership of Downey Ranch and Kniebel Cattle Co. How did we start? How do we make it work? Barb and Mary Ann became best of friends in the late 80's, and maintained that friendship with the husbands being great friends too. Our operations are very similar in size and goals.

Why do we work together? The answer is simple; because it is so much more enjoyable to work together than to go it alone. There are synergies to be had with the partnership: everyone needs the "grand thinker", the lover of all things new and shiny and how they can be applied. At the same time you need the practical thinker that asks "what about this" and says "these are the pitfalls I see." You know - gas pedal and brakes. A car needs both if you want to move forward and not crash and burn. We truly care and value what the other brings to the table and know that it balances the equation beautifully. Being drug, kicking and screaming sometimes, to a new technology, or being throttled back with thoughtful changes, are both very valuable tools! And finally, whenever we make any decision that will affect the partner, we always put the other first. There is unquestioned trust between us.

Coming from a long-line of ranchers, the Downey kids grew up with a love for the land, cattle and horses, but not on a ranch proper. After receiving an ASandI degree from KSU, Barb and her dad Joe started ranching in 1987 with Barb as the day-to-day operator. First steers, then commercial cows, a marriage to Joe Carpenter in 1990 and finally the start of the registered Angus herd in 1993. With a philosophy of continual improvement and with the freedom of not knowing "you can't do that," Downey Ranch has grown into a progressive operation that ties every production step in the beef business all together.

From the breeding and proper development of seedstock that sets the course for decades down the road, to the range cow who functions year-round on range, to grazing our own ranch-raised stockers, and finally finishing out our own genetics (since 1991), Downey Ranch truly understands exactly what the commercial cattle producer does and what it takes to be successful.

We have and will always run commercial cows with our registered cows right in with them. It is imperative we run our business under as tough of conditions (if not tougher) as our customers. We have our mission statement, and if you put it in plain-speak, it says this:

"NEVER WRECK ANYONE'S COWHERD."

It is our promise that we won't propagate genetics that come up open, have poor feet and legs, bad udders, are hard to handle, etc, etc, etc. We have no interest in you as a one-time customer. Rather, we hope to have the honor of our next generation helping your next generation to continue the success we've all worked so hard to achieve.

Kevin and Mary Ann live at the original homestead location of what is now Kniebel Cattle Co. Kevin's great-grandfather settled in the White City area in 1878, and like most farms, maintained a mostly Hereford cattle herd for many decades, along with a farming operation. The one thing very different about the Kniebel family, is their history of cattle feeding! They have always fed their calves and sold them as finished cattle, 'walking off the farm' the grain and forage they raised. In earlier years cattle were driven to the railhead to load, then Kevin's grandpa trucked them all to the Kansas City Stockyards. The industry evolved and there was a packing plant in Emporia Kansas that we delivered to, and that was still the protocol when Kevin started management in the ranch.

When Kevin and Mary Ann got married, they decided to utilize Mary Ann's masters in reproductive physiology and experience in nutrition to add another level to the operation and purchased registered Red Angus cows to raise bulls that would work better for breeding calves that had 'multipurpose' in mind. By that statement, it simply means we wanted it all! We retained our own females, and fed the rest of the calves out, so we wanted good females AND good feedlot performance. Bulls of this caliber were available, but not in our price range, so we decided to raise our own.

Along with the growth in the operation, starting a family, and the great fun of debt management came the huge transition in our fed cattle operation. As a smaller feedyard, we felt the noose tightening on our ability to market finished cattle effectively. This was the start of U.S. Premium Beef. The original goal was market access- to be able to market higher quality cattle more effectively as a collective group of ranchers and feedyards. The thought of getting paid premiums for higher quality cattle was not even in the picture in the beginning. We all now know the story of USPB and how it changed the industry in so many ways, the most important one being able to sell higher quality cattle for a higher price. But the learning curve was steep and painful! Let me explain: the extent of data we received from the packer before USPB was this...question from us.."How did that load do?"...response from cattle buyer "Fine." Well that's great, but how does one manage 'fine'? So, here comes our USPB first deliveries and wow, did we get our head handed to us on a platter. Remember, at that point in feeding cattle, the goal was to get-them-gone as soon as packers would buy them. Creating carcass quality was not in the forefront, as we had never been paid that way before. Some lessons can be learned very quickly! As we found out, we had finally reached the point in the growth of the animal where they are ready to hang on the 'good stuff', more muscle and marbling-and we rushed them out the door before they were done. The average days on feed from 1997 til now has increased by over 50 days! We learned our lesson quickly and adjusted how we fed cattle. To date, we have marketed more than 15000 head through USPB, and averaged over \$50 per head premium for the entire lifespan (much more in recent years). Our spring calves that are 12-14 months old at slaughter run 98% choice-and-higher of which over 15% are prime.

Around the same time as USPB data started rolling in, EPDs were just being implemented widespread in the industry. The Beef Improvement Federation (consortium of breed associations, industry and academia) has done a great job of giving us tools to analyze cattle more quickly and more effectively. Now we have the inclusion of genomics in the equation, and we have so much data to look at it is overwhelming sometimes. We enjoy breeding cattle. We look forward to calving season to see how our choices manifest themselves! We are also a little unique, in that we still maintain more commercial cows than registered and use our own genetics on those cows. We feed out all those calves and get data back to quantify our choices, plus keep females back and measure how they do as cows. All of our cows are handled on the range and expected to perform as a cow, and not be pampered or given excuses. We have carefully grown our numbers so that we can now offer bulls both spring and fall to help customers manage their genetic needs. We are able to use EPDs, and also judge how our bulls are doing by using our carcass data and replacement female data. The complete picture, or 'conception to consumption' as we like to say.

We are now in the next era of adding a new generation to the ranch. Clay decided to come back to the ranch, so he and his wife Shannon and 16-month-old Colter are now involved! Cassie, her husband Dustin, 19-month-old Dane and little boy due the end of September are in Kansas City, and help when they can. They bring a new set of eyes and ideas and we look forward to the changes coming.

We have one overriding goal in the bulls that we sell---Don't mess up anyone's cowherd! We are in it for the long haul, like you!

Improved Buying Confidence with Greater Genomic ASSURANCE

Access to more and better information has always been key to making wise decisions. The evolution and improvement of genetic evaluation tools too has given us an ever-clearer picture of the true genetic makeup of cattle and thus a better view of the value proposition. RightMate, powered by Top Genomics LLC is taking the evaluation of genetics and genomics one giant step further. By combining specific genomic information with the long-proven value of EPDs, this new advancement in technology improves our depth and precision when evaluating the actual ability to transmit value and profit.

The 3 Accreditation Logos below are designed to simplify bull selection and improve buyer confidence by more accurately describing the genetics offered and by reducing risk. What this means to you as a customer is a much greater assurance that you are getting both what you want and need from the genetics you purchase. What it means to your seedstock provider is access to RightMate technology that simply sets them apart from the rest of the industry.

ACCREDITED GENOMIC PLUS – For the majority of producers who simply need consistent and balanced genetic improvement, without genomic setbacks, G+ Accredited bulls should be on your list for premium purchase. These sires will absolutely move you forward

for both cost reduction and income producing traits and substantially reduce risk when compared to all other evaluation programs. It's simple, the right genes are in these bulls to help secure a profitable future and the they have great EPDs to match!

ACCREDITED TERMINAL MATE – Just like an ATM machine makes it simpler to access your cash, the ATM Logo highlights bulls accredited to generate extra cash income as soon as your next calf crop! These bulls are meant specifically to use only on mature cows and for the purpose of adding performance, pay weight and end product value to market.

ACCREDITED CALVING EASE – Simply find bulls with the ACE logo for third party Accredited, secure Calving Ease bulls. Though we have had tools in the past to assist in choosing heifer bulls, we've never had one nearly this effective. The reduced risk that comes with this

genomic certification will simply make your decisions easier and your heifer calving season more successful. Purchase special purpose ACE bulls with confidence. They will deliver consistent and predictable calving ease.

MARTY ROPP 406-581-7835

RightMate

FROM THE SALE MANAGER

Allied Genetic Resources is based on the simple concept that successful, commercially focused seedstock producers are so because they are always thinking about the future and they prioritize their two most important value propositions, genetic improvement and advanced customer service. In the end, both are critical for their success and ultimately to the success of both their immediate commercial customers and the beef industry as a whole. Founded in 2010, Allied provides a wide array of services for both the commercial and seedstock industries and leverages a large part of its value based on the combined reputations of the nearly 100 high reputation, independent seedstock producers located coast to coast, who own the business.

The Downey and Kniebel families fit perfectly into the Allied family, because promoting the success of the commercial beef business and their customers have always been their primary focuses. Both have a long history of prioritizing genetic improvement and then benchmarking that improvement with carefully measured female production and profitability records and then feeding cattle to prove their ultimate worth to the beef business. Both two are deeply involved in leadership roles across the beef industry, both among genetic organizations and through initiatives that promote US beef to the world.

Reputation and customer care too are primary values that are simply not negotiable at Allied. These families treat customers the way they themselves wish to be treated, period. Their reputation and ours rest on that simple statement. We only work with herds who believe and act the way we do. The Downey and Kniebel brands are well known nationally simply because they consistently produce and stand behind no-nonsense, commercially designed genetics with profit bred in for all beef business segments. No flash, just satisfaction.

As Kniebel and Downey customers you too can count on the Allied team for value added service. Within Allied we offer professional and proven feeder cattle marketing services with Clint Berry and Rocky Forseth leading our marketing team. Data services, advanced genomic tools for the future from Top Genomics LLC, in addition to a substantial amount of commercial consulting built around matching genetics with purpose are just a few of the service options that help complete our full-service genetic provider circle. Your genetic provider is your conduit to Allied and we want to build a relationship that includes them as a crucial part of your success moving forward. So, whether you meet our team as part of the marketing services at one of the bull sales or by direct contact, we are always anxious to visit with you as important customers of the Downeys and Kniebels.

Sincerely,
Marty Ropp, Corey Wilkins and Jared Murnin

— ANGUS —

Bulls

FAIR-N-SQUARE

Sons

Fair-N-Square progeny have been very well received all over the US. His impeccable structure and foot quality has made him one of the heaviest used bulls in the breed. His progeny are very attractive, deep bodied, with muscle shape that is second to none. To top it off he is backed by a great cow family that is known for fertility and longevity.

HOME TOWN

Sons

Home Town offers below average stature with calving ease, growth, and superior carcass traits. He is backed by generations of precision matings for performance and carcass traits but what makes him so unique is his moderation of mature size in a heavy muscled, eye appealing package.

Downey Ranch Donor Selection. We've been running an Embryo Transfer (ET) program for some time now in order to increase the influence of those cows we've identified as superior. We think it's impossible to know if a cow is superior as a heifer. She hasn't proven herself yet! If we're going to say "Built for the Long Haul" we'd better mean it.

- 365 day calving interval on at least 3 calves.
- Superior progeny.
- Structure that will function well over the years; feet, legs, udder, topline, etc.

This year we brought in a 3rd calf cow we had marked for a possible donor. Then we saw rear toes that were starting to curl. She went from a donor candidate to a pasture with no bull. This fall, she goes to town and her calf goes into the feeder pen. If you flush unproven females, you can have lots of progeny out in lots of herds, sell her as a "high-value donor" into another herd. And if her toes start to curl? "We've got a lot of money in her. Call the trimmer." That will NEVER happen at DRI. We take our one-line mission statement saying "never wreck anyone's cowherd" seriously here.

Notice top-of-the-breed EPDs don't appear on the list. A donor has to have a number set that's workable, but if you look at our donors' EPDs, they're often not the highest. What we have found is that as those cows get progeny on the ground in numbers, their EPDs start to move in ways that validate what we've already seen in those superior calves they produced before coming into the donor pen. Remember, genomics is a tool, but it falls way short of telling the whole story.

S POWERPOINT WS 5503

POWERPOINT Sons and Grandsons

The bulls sired by PowerPoint are big ribbed and stout! His outcross pedigree gives his sons a lot of mating flexibility for most operations. His sons are impressive but his daughters are the real deal. They are big ribbed, easy fleshing with great udders.

LOTS 48-51 *Flush Mate Brothers*

Let's Talk About Feeding Bulls. How you handle them in the growing phase makes such a huge difference in their lifetime performance. I will challenge you all to make sure you look at the backfat of bulls when they are ultrasounded. You do not want to see .5 inches of backfat and higher on a bull. Yes, they will have impressive yearling weights and be that bigger bodied, smoother (because of fat) bull that sure is pretty in the pen. But they will also have fat deposited in the scrotum- that is just the way it works. That fat is laid down everywhere. Those bulls have a hard time losing that fat in the scrotum and it affects the temperature regulation of those testicles. This summer has been one of amazing heat spells...those fatter bulls will suffer much more than the rest and be shooting blanks. This fat also gets laid down in the liver and affects liver function. I think you get the point. How should bulls be developed? They need to have enough calories to express their genetic differences but not be pushed for "5lb gains". Can they do it? They better be able to. Many feedlot cattle can. But that is not how you develop a bull with sound feet and sound internal organs and testicles. One of the best things for developing bulls is also exercise. A bull that has never been out of a pen cannot be expected to handle being dumped in a pasture and perform athletically. Remember this when you get bulls home from wherever you buy them, and also of your herd bull battery getting ready for breeding season. Remember they are athletes getting ready for the big game and need proper care!

Our Nutritionist – Mary Ann. In 1988, I switched ends of the cow. I went from doing Embryo Transfer work in Texas to move back to Kansas and do nutrition work. Since then I have been involved in the feedlot industry and the research and improvement that has occurred. I still maintain that what we don't know about cattle far exceeds what we do know, but that is part of the fun! As I alluded to in the Kniebel background story, things really started to change when we started getting carcass data on cattle and were paid on carcass performance. Suddenly, it wasn't just all about pounds of carcass, but also increasing quality. There is a tightrope that you walk as you increase days on feed, density of a ration and particle size of a ration and try to balance that with rumen health. Quite frankly, rumen health, which definitely affects animal health, has been thrown under the bus in the name of efficiency—lbs. of feed per lb. of gain. Efficiency is extremely important, but having the majority of your pen acidotic and having liver abscesses continually escalating, means you have a lot of those animals on that tightrope. A weather stress, or a disease exposure can really topple those cattle. If you are a large feedyard that owns your own cattle you might have a tolerance of pen deads that is much higher than what we as retained ownership folks can tolerate.

I know that steps on a lot of toes. I don't care. There are no great mysteries to feeding cattle. Yes, it is a numbers game, coupled with knowledge of how certain feedstuffs perform over others, as well as how some kinds of cattle perform differently (ex; Holstein vs beef). Ruminant animals are just cool... you can literally make a ration out of almost anything. I had one grow yard that had whey from a cheese plant and outtakes from a pizza manufacturer. Those cattle got pizza and milk every day in their ration! Maybe not as good as the ones that got the hostess leftovers, but to the rumen, calories are calories. Our finish ration that we use in our feedlot still accomplishes great gains, but our gut health is better.

EXEMPLIFY *Sons*

LINZ EXEMPLIFY 71124

Exemplify combines breed leading growth and carcass traits. His progeny excel at weaning but they don't quit there as they also excel in the feedlot and on the rail. He is one of the top proven bulls in the database for foot EPDs. To top it off his progeny are very eye appealing and possess great rib and body depth.

Why wouldn't you breed cows to him? 122 marbling ratio ices the cake.

TEX PLAYBOOK 5437

PLAYBOOK Great Grandsons

The Playbook cattle have long been known for combining impeccable phenotype with a very complete EPD package. Playbook progeny have that extra eye appeal combined with exceptional volume and muscle. Playbook himself ranks in the top 1% of the Angus popular for Docility, \$M, and \$W as well as being in the top 20% for \$C.

The Calving Ease Chase. The last several years have seen an unprecedented chase for calving ease. We should all stop and ask ourselves, is that a good thing? Let's take a look at some of the downsides of the calving ease chase:

- Small calves have a reduced ability to handle cold and wet,
- Small calves sometimes lack punch and don't grow as well,
- Possible smaller pelvises in replacements leading ironically to more calving trouble later,
- Shorter gestation MAY cause smaller mature organ size of heart, lungs, etc. meaning more sudden death under stress (heat, altitude, feedlot weights, etc.),
- Who knows what else!

Most commercial folks don't weigh calves. We do. Cows can and should have 90-100 lb calves with no problems. We'd prefer our mature cows' calves to be >80 lbs and our heifers in the 70s. We don't like them smaller and are concerned about the unintended consequences for the animal/herd down the road. That is why we look for calving ease sires that have the desired CED and then look for neutral or even positive BW EPD. For cows, we don't sweat the BW. Bigger calves hit the ground running and never look back. And just so you know, we would NEVER sell anything we wouldn't use ourselves. Like most things in life, it is possible to have "too much of a good thing."

YEARLING *Angus Bulls*

Because of customer requests, we have developed a fall ET program to compliment our spring ETs. The aim is to bring you yearling and age-advantaged bulls in both the Spring and Fall Editions of the Built for the Long Haul Sale. We worked with our long-time customer and friends in this inaugural crop and they did a great job. The bulls grew in a commercial herd on native Flint Hills grass, just like our own herd. They were weaned, Vac-45'd and brought to DRI on July 21. We've grown them on our forage-based diet, they've had their genomics, been ultrasound scanned for carcass traits and will ALL pass their yearling BSEs. Updated carcass EPDs and SC will be available as a supplement sheet. We're introducing the option of yearlings to you with these five stand-out bulls. We know you'll like them!

We purchased the right to flush this dam because she'd had 11 calves and never missed. We'd used a son of her in our own herd a few years back and were impressed with the growth and type. She did everything we expected out of a donor and these bulls do not disappoint. Maternal power and marbling deluxe.

— RED ANGUS —

Bulls

Our lead sire group stems from Bieber Stockmarket in the 2023 sale offering. We have utilized two of our sons of Stockmarket in KCC Heroic and KCC Habit. We feel the sons in the offering, out of both sires represent the true dual-purpose kind who will increase your payday when you market your calves while having the type of replacements who will keep you in business for years to come. Each of the Stockmarket grandsons rated as a G+ (Genomics +) on Rightchoice reinforcing the fact they will increase profitability of your operation in a magnitude of areas. Finally for customers who finish cattle or retain ownership these bulls will enhance marbling and the quality grades of their offspring.

A smooth made calving ease specialist with high REA. Hard to find!

We utilized Collier Finished Product through AI and have been really pleased with the results. The lead bull in the sire group is an outlier for mass and stoutness while the next two herd bulls in the sire group would be great heifer bull candidates. All three herdsires represent quality and will pass on traits to make incredible females. Finally, here is a fresh outcross pedigree for long time buyers.

A heifer bull out of a first calf heifer, so only 3 stars til she gets older!

AGE-ADVANTAGED RED ANGUS BULLS

EXCELLENCE

Sons and Grandsons

KCC Excellence has proven to be one of best in the Red Angus business at being a wonderful heifer bull candidate who offers an outcross option to many poplar pedigrees. We have several bulls in this section who fit the bill and will continue on the legacy of Excellence in terms of CE and female makers. In addition, we have used two Excellence sons in our program, Highclass and Harem-- their sons will study with a bit more mass and growth versus their sire and will increase terminal merit.

Power, depth, muscle (top2% REA) and a really good cow family.

Fertility is the Foundation. How many cows bring in a calf every year is the biggest single indicator of sustainability in a cow/calf operation. In a single word: FERTILITY. That is why functional females with the ability to do just that under real world conditions are the foundation of our seedstock herds. The geneticists will tell you fertility is a lowly heritable trait, and it is in isolation. However, the measure of bringing in that calf every year is so much more than technical fertility. It answers calf vigor, attentive mothering, easy to nurse udders, the structure to get up and down hills and eat so that the body knows to start cycling for rebreeding, shedding out so your body temp isn't too high to allow implantation, and the list goes on.

Our bulls are raised by cows who can do the above. Then their development is moderate so their livers are healthy, there's no fertility-robbing fat in the scrotum, the laminae of their feet are solid so they're not too sore to chase cows. Finally, they must pass a yearling BSE (even if they're slated to sell at 1.5 yrs).

We want your operation to be in it for the long haul; now and 20 years from now. And for that, fertility is the foundation.

Built for the Long Haul? How do we ensure your herd and your business have staying power? We stay out of the way of good old Mother Nature when we're developing and selecting seedstock. What do we mean by that?

- Opens go down the road. That answers a lot of problems.
- Cows calve on range and eat forage year round. Grain during the breeding season is a time-trusted way to get more cows to breed, but not here. If they can't breed on modest forages, we're done.
- Cows that can't traverse the rocky Flint Hills because their structure isn't good show up open to. We do not trim feet.
- Heifers at DRI are turned back out after weaning so they learn to fend for themselves.
- We keep mature size moderate. Sure, we'll market growth specialists, but if you're looking for cow-makers, find the 3 and 4 star female bulls. They have the ability to keep your herd in line for mature size in addition to good fertility, fleshing ability, udders, etc.
- Develop bulls properly. Read the article on page 25 for more detail, but fat sale bulls cause a lot of problems that you may never recognize as the reason for having more open cows than you want.

AGE-ADVANTAGED SIMANGUS BULLS

HOME-RAISED COMMERCIAL BRED HEIFERS

KCC and DRI are pleased to offer 75 bred heifers to calve next spring. The heifers represent the top of our spring born heifer calves. We kept heifers that were born in the first ½ of the season, were neither too big nor too small, had good temperaments, were good performers and were structurally correct. From that elite group, we selected heifers from the best cows. We are offering you the best of the best! These are NOT put together heifers, but rather the top our own herds with generations of AI, tough selection and proven performance on the range and the rail.

Heifers are bred to calving ease Black Angus (DRI) and Red Angus (KCC). The heifers have all their shots and have been dewormed.

Due to space constraints, the heifers will NOT be onsite. Complete information on each lot will be available on a supplement sheet online and at the sale. Videos of each lot will be online before the sale and will play during the sale. Heifers will sell in groups of 3-5 head.

Base Bid on Heifers - These are the heart of our herd heifers. Known, proven genetics add value and keep your foundation solid and improving. The base price on bred heifers will be \$1900.

Calve-Out with our Live Calf Guarantee - Let us do the calving for you! \$450 per head due sale day. See page 4 for complete details.

**Please note: No guarantees available on heifers taken home to calve.*

REGISTERED FEMALES

Both Downey Ranch and Kniebel Cattle Co have reached a point where select groups of registered females will be made available Private Treaty. We want to bring you the BEST we have to offer, and after much consideration, we will be offering all of a category of females with NOTHING HELD BACK:

- Every SimAngus female we produce, both RAXSM and ANxSM. Nothing will be held back and you'll get the best we have to offer both from KCC and DRI.
 - This year, both operations have bred registered SimAngus heifers available that calve next spring. They can be bought with our Live Calf Guarantee (see page 4 for details).
 - Both ranches will sell registered Sim-cross open heifers, ready to breed, in the spring!
- Every registered black Angus fall-born female we produce. DRI has cooperator herds for embryo transfer. This year's crop was produced utilizing male sexed semen. That process is never 100%, so we have 2 outstanding Fall 2022 born heifers that will be sold open and ready to breed. In future years, we will have larger groups to offer. Nothing will be held back!

On occasion, producing mature cows may be offered, generally bred or as pairs ready to breed. Please call us for more information!

Replacement Heifer Feeding. There is not a one-way-fits-all template here either. Downey Ranch kicks their heifers back out on range with a little protein supplementation until late February. Kniebel's run replacements on grass with a no grain ration for slow growth. The goal is to get a heifer at roughly 55% of her mature weight and see lots of cycling before breeding season. IF THEY ARE OVER CONDITIONED- here are the consequences. Fat in the udder is a lifetime detriment to milk production. Did you know that there are stem cells in the udder waiting to determine if they are going to be mammary or fat cells? Guess which one wins when they are fed too hard. They never change back. You can also affect their feet longevity, the same as a bull. Also, when those over-conditioned heifers are turned out on grass they will go backwards for 3 weeks trying to get adjusted to their new feedstuff (grass) and get their rumen transitioned over to digest roughage more efficiently. Even in properly fed heifers, this is one of the number one reasons for lower conception rates on artificially inseminated groups. You need them in good shape, but if they are fleshy, OR you don't have them transitioned to a roughage diet so they are adapted to the pasture, they go backwards when you turn them out and conception rates suffer.

PERFORMANCE DATA

- BW – Bull's birth weight as adjusted by the American Angus Association or Red Angus Association
- WW – Bull's weaning weight adjusted by the AAA or ARA to 205 days
- YW – Bull's yearling weight adjusted by the AAA or ARA to 365 days
- Scrotal – Bulls scrotal circumference in centimeters adjusted by the AAA or ARA to 365 days of age (1 year)

PERFORMANCE EPDs (EXPECTED PROGENY DIFFERENCES)

- CED/CE – Calving Ease Direct is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which an sire's calves will be born when he is bred to first-calf heifers.
- BW – Expressed in lbs, is a predictor of a sire's ability to transmit birth weight to his progeny when compared to the progeny of an average bull in the breed.
- WW and YW – Expressed in lbs, is a predictor of a sire's ability to transmit weaning/yearling growth to his progeny compared to the progeny of an average bull in the breed.

MATERNAL/REPRODUCTIVE EPDs (EXPECTED PROGENY DIFFERENCES)

- Milk – Also called Weaning Wt Maternal, is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters. In other words, it is that part of WW attributed to mi and mothering ability. It is compared to daughters of an average bull.
- Stayability – The expected difference in probability of daughters staying in the herd at least 6 years. The EPD is primarily a measure of sustained fertility in female offspring. Available for Red Angus, Red and Black SmAn ONLY.
- Heifer Pregnancy (HPG or HP) – predicts the probability of heifers conceiving to calve at two years of age.
- ME – predicts differences in energy requirements of mature daughters of an individual and is expressed in Mega-calories per month. FOR THIS INDEX, THE LOWER THE NUMBER, THE BETTER! Red Angus and Red SmAn ONLY.

CARCASS EPDs (EXPECTED PROGENY DIFFERENCES)

- CW – Carcass weight, expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.
- Marbling – expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires. Higher marbling scores are positively correlated with higher carcass quality grades.
- REA – expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to other sires.

RED ANGUS AND RED SIMANGUS ONLY:

- HB – Herd Builder A maternal selection index that predicts economic differences for traits important from conception to weaning.
- GM – Grid Master a selection index that predicts economic differences in terminal only calves post-weaning. GM places selection pressure on growth, Feedyard performance and carcass characteristics. Expressed in \$/head.
- ProS – Profitability and Sustainability is an all purpose index that predicts average economic differences in all segments. This assumes you're keeping replacement heifers and feeding out all others and selling on a grid. Uses HP, Stay, mature wt, DMI and carcass traits. Expressed in \$/hd.

ANGUS ONLY:

\$Value indexes are multi-trait selection indexes, expressed in dollars per head. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires

- Cow Energy Value (\$EN) – expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses).
- Maternal Weaned Calf Value (\$M) – an index expressed in dollars per head, predicts profitability differences from conception to weaning with the underlying breeding objective assuming that individuals retain their own replacement females within herd and sell the rest of the cull female and all male progeny as feeder calves.
- Weaned Calf Value (\$W) – an index value expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. Includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk and mature cow size.
- Beef Value (\$B) – a TERMINAL index value expressed in dollars per carcass, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.
- Combined Value (\$C) – combines both Terminal and Maternal traits into one index. Not real wild about this one as it doesn't tell you which way you're going.

BLACK SIMANGUS ONLY:

- All Purpose Index (API) – Evaluates sire for use on the entire cow herd (bred to both Angus first calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield. Index units are in dollars per cow exposed. Not real wild about this one either.
- Terminal Index (TI) – Evaluates sire for use on mature Angus cows with all offspring put on feed and sold grade and yield. Index units are in dollars per cow exposed.

ALL ABOUT THE DATA

SIMPLIFY YOUR LIFE WITH "THE STAR SYSTEM"

On all our bulls, you'll see a box of stars. We get tough and you'll see 1 and 2 star bulls (still solid bulls!) in the catalog. We wanted to accentuate differences in bulls. This lets us take multiple EPDs along with what we know about the cow families and the conditions of that production year and summarize it all for you. In other words, if they're a 4 star Calving sire, we know that the shape of that bull, his data and pedigree and his mother's history all combine to make him one we wouldn't hesitate to use on heifers. 3 stars means we'd use him on heifers UNDER SUPERVISION.

Does this mean one star is a cow-killer? Absolutely not. We would NEVER sell anything we would not use in our own herds. PERIOD.

One star calving ease means use on mature cows without a history of problems. For females, we're taking longevity, udder structure, fertility under range conditions, mature size, fleshing ability, etc. into account. That a bull gets 3 stars means he probably has a young dam or we don't have a lot of experience with his sire.

For carcass, 3 and 4 are improvers, 2 is average. Growth stars are similar, but remember, more growth doesn't always mean more \$\$ in your pocket. Optimum and maximum are often 2 different things. A 2-star growth bull may be exactly what you need. Remember: 2 stars is average, 3 stars is above average and 4 stars is exceptional.

ACTUAL PERFORMANCE, GENOMICS, AND EPDS

EPDs take into account individual performance, genomics and ancestry across different production systems, climates, herds, etc. instead of just one individual's performance in one herd in one set of circumstances in that particular year. Therefore, we consider EPDs (in general) a better indicator of that animal's genetic abilities than actual performance. In the case of Embryo Transfer, a bull's actual performance is meaningless in the calculations because you can't account for the affect of the recipient dam.

We have some bulls who are older than the average and some that are younger. The breed associations adjust it using many variables and come up with a standardized number so that bulls can be compared on a more even footing. For example, what would this bull have weighed at 1 year old (365 days) given that he weighed 1325 when he was 400 days old coming off test. This tends to overcompensate younger bulls and penalize older bulls, especially in a herd comprised of earlier maturing cattle. This is why we generally (not always!) recommend you look at EPDs over actual performance. In those cases where we feel strongly the EPDs don't reflect a bull's potential, we will make note of it in the comments.

UNDERSTANDING AND INTERPRETING THE DATA

In general, the AAA has set things up so that the higher the number, the "better" it is. In other words, for calving ease direct (CED), a bull with a 9 would calve easier than a bull with a 2. A higher marbling EPD means more marbling and so forth. However, please be careful not to think that bigger is always better. A bull with an outrageously high \$Beef value may give you huge frame scores and hard doing cows. Higher milk values could lead in some instances to udder problems and cows that milk themselves down too much and therefore have trouble rebreeding. The other thing to consider is how much data is behind the numbers the Association generates.

We're excited about the \$EN value index which attempts to get a handle on more efficient cows. However, this the Association uses Milk EPD and mature size only to calculate this number. This misses those really efficient outliers (and some hard-doing ones too!).

The Red Angus Association is the only association that builds EPDs from Total Herd Reporting (THR). THR uses data from the entire calf crop - not just the calves that were good enough to register. The biggest benefit of THR is the elimination of reporting bias from data used to calculate EPDs. Perhaps even more significant is the overestimate of performance of sires whose poorer performing calves are not reported.

This next thought cannot be stressed too much. YOU CAN NOT COMPARE EPDs ACROSS BREEDS!!!! Black Angus breeders consider BW +2.0 and below to be suitable for use on heifers, while Red Angus breeders will usually want a negative BW EPD.

Having said that, here are the averages for non-parent sires in the AAA, RAAA, and ASA as of September of the current year:

ANGUS BREED AVERAGE EPDs

CED	BW	WW	YW	HP	MILK	\$EN	CW	MARB	RE	\$M	\$W	\$B	\$C
7	1.2	63	111	12.1	27	-14	49	0.66	0.64	63	59	140	243

RED ANGUS BREED AVERAGE EPDs

PROS	HB	GM	CED	BW	WW	YW	MARB	RE	CW	MILK	ME	HPG	STAY
94	55	39	13	-1.9	60	96	0.43	0.14	23	25	2	11	15

SIMANGUS BREED AVERAGE EPDs

CE	BW	WW	YW	MCE	MILK	MWW	STAY	DOC	CW	MARB	REA	\$API	\$TI
12.3	0.3	76.1	117.4	6.6	22.9	61.1	14.8	12.2	31.2	0.32	0.66	130.9	78.7

DO NOT COMPARE EPDs ACROSS BREEDS. THEY ARE VERY DIFFERENT!!!
